

We are witnessing an evolution in healthcare: the emergence of fitness-related data as a vital sign. This is a natural evolution, as fitness-related data is more closely correlated with true health and wellness than traditional health data. Combine these two types of data, and new utilities emerge that are key to effective, comprehensive care. All of this data is generated in the Global Digital Health Market, which is still in its early, formative stages and projected to double over the next five years. Already, 2016 was a landmark year for this market, as mobile health and fitness app downloads topped 3.2 billion, creating 96 billion USD in value. The Global Digital Health Market is creating lakes of untapped and underutilized data that can be used to save lives.

TeamMate will optimize this market category by creating an e-commerce ecosystem that plugs into the mobile health and fitness landscape of the future - while providing meaningful improvement in the quality of human life. This ecosystem is built on incentive and verification systems that utilize three powerful mechanisms to achieve transparency and athletic evolution: gamification via TeamMate Tokens, consensus algorithms via smart contracts, and human verification via social athletic activity. This gamified digital universe allows TeamMate to generate, collect, organize and share data in such a way as to maximize its utility to both the users who provide the data, and a health and fitness industry that depends on it to make informed decisions - while protecting the user’s privacy. TeamMates own their data and can monetize it. **This is the TeamMate Blockchain Solution.**

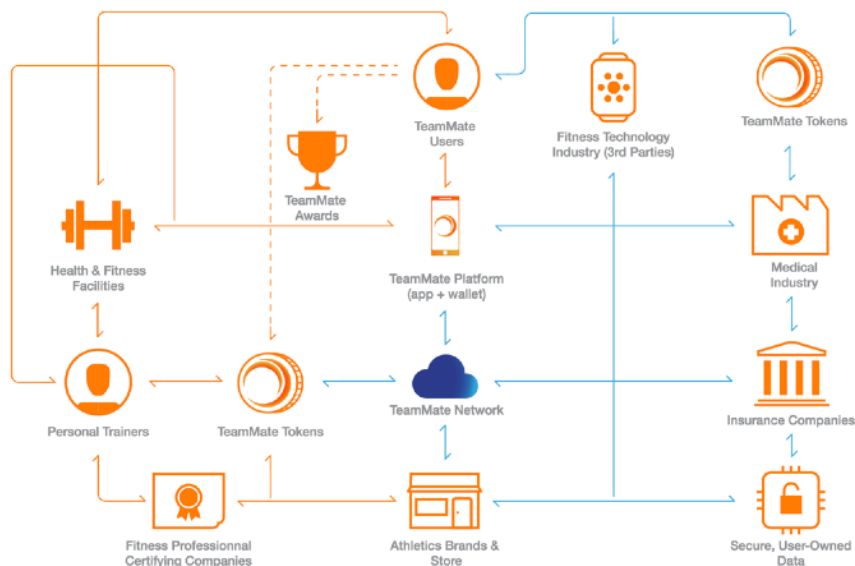

TeamMate Mobile App

The TeamMate mobile app is a digital reflection of users’ athletic lives, a conduit of communication to the health and fitness industry, and a smart social discovery tool that learns how to identify and match optimal training partners according to each user’s preferences, progress, and athletic evolution. The TeamMate app encourages users to do healthy activities together in real life, and rewards that behavior by both social proof and award in the form of **TeamMate Protocol**.

TeamMate Network

The TeamMate Network is a blockchain-based decentralized marketplace and open platform that facilitates efficient health and fitness value-flow. It allows users to monetize data and custom content through a multitude of channels, while providing touchpoints between both athletic brands and third party mobile health applications, and TeamMate’s own databases.

TeamMate Protocol (TMP)

TMP is an ERC223 token that provides access to the TeamMate Blockchain Solution. TeamMate Tokens are earned by users as compensation for their data, and can be exchanged for a range of health and wellness goods and services via the TeamMate Network. Early adopters can opt-in to TeamMate’s **Token Release Contract** by locking in their TMP in exchange for monthly bonus tokens.

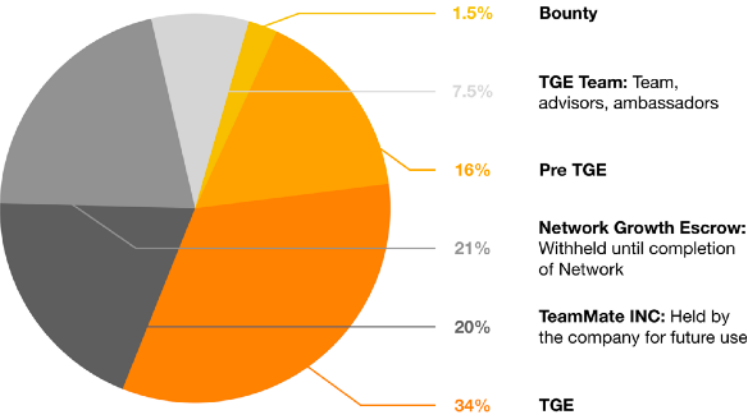

Smart Contracts

TeamMate users are granted unique wallets and IDs which are used to authenticate and verify all interactions within the TeamMate Network. TeamMate’s smart contract protocol allows transactions to be executed transparently, securely, and instantaneously. As the Network evolves, TeamMate smart contracts will execute functions in conjunction with deep learning algorithms to deliver powerful capabilities to TeamMate users.

Token Generation

	Token Available	Stage	Price (TMP / ETH)	Discount
Pre TGE Sale	162,000,000	Flash Sale (1st 24 hours)	16,250	63%
		Stage 2	15,000	50%
TGE	338,000,000	Week 1	12,500	25%
		Week 2	11,875	19%
		Week 3	11,250	13%
		Week 4	10,625	6%
		Week 5 until sale end	10,000	0%

Token Distribution

Hard Cap: 24,000,000 USD

Soft Cap: 500,000 USD

Base Conversion Rate:

1 ETH = 10,000 TMP
